Edge Airport France

Airport Manager L-DCS

Local Departure Control System

Multiple airline flights

LDCS manages multiple flights simultaneously and includes an automated reading of passenger documents (passports, identity cards, boarding passes, ...)

Cabin Plan

LDCS manages passenger check-in and allows placement of passengers. The assignment of seats (**seat mapping**) is done by geographical choice in cabin plan or by direct entry. It also manages **free seating**.

PNL - Passenger Name List

L-DCS automatically incorporates the passenger list from **PNL** and **ADL** messages. It also allows, where appropriate, for **manual entry** of passengers.

Passenger Boarding

L-DCS is able to operate up to 3 **BGRs** simultaneously, that facilitate and accelerate the passenger boarding process. The barcoded boarding passes are read and the passenger list is printed.

Passenger Monitoring

All the checked-in and boarded passengers are monitored in real time. A passenger list is published showing checked-in passengers, Go-Show, No-Show, passengers with special needs.

List of bag tags is provided and flight closure form is generated.

Weight & Balance

With airlines agreement, LDCS generates the **loadsheets**.

Mobile Solution

L-DCS solution is available in **mobile version**.
