IATAText - Aeronautical Message System

Technical description

The «IATATEXT» software allows the sending and receiving of Type-B operational messages.

It is fundamental to the functioning of DCS in order to receive PNL/ADL messages to the address of the type xxxAMX. During flight closure of LDCS, IATAText facilitates sending of messages of the type PFS, LDM, PRL, PTM, ETL, etc.

The IATATEXT interface also allows manual sending of any other operational messages.

IATATEXT gère parfaitement la double-signature afin que les messages émis pour le compte des compagnies aériennes ne soient pas facturés à l'aéroport mais aux compagnies.

The screenshot shows the IATATEXT software interface. On the left, a 'DEPART' window displays flight details for 'LONDON (STN) (L)'. Below it, a yellow arrow points to a generated message: `LDM FR8546/15 PFSR1 Y189 2/4 -STN 163/4-2 T843 1/800 2/843 3/000 4/000 BP/81 B/843 C/000 N/000 PAR/167 SI NIL`. On the right, a 'Messages' window shows a list of messages with columns for Date, Time, From, Subject, SM, and Part. A message is selected, showing details like 'From: IATATEXT', 'To: IATATEXT@Edge.aeroairport.net', and 'Subject: ACC25/05 PFSR1 58 3/1'.
