# IATAText - Aeronautical Message System

## Technical description

The «IATATEXT» software allows the sending and receiving of Type-B operational messages.

It is fundamental to the functioning of DCS in order to receive PNL/ADL messages to the address of the type xxxAMX. During flight closure of LDCS, IATAText facilitates sending of messages of the type PFS, LDM, PRL, PTM, ETL, etc.

The IATATEXT interface also allows manual sending of any other operational messages.

IATATEXT gère parfaitement la double-signature afin que les messages émis pour le compte des compagnies aériennes ne soient pas facturés à l'aéroport mais aux compagnies.

The screenshot shows the IATATEXT software interface. On the left, there is a 'DEPART' section with flight details for 'FR546' to 'Y189'. Below this, a yellow arrow points to a text box containing the following message:

```

IDM
FR546/15 PFSRI Y189 2/4
-STN 163/4/2 T043 1/000 2/043 3/000 4/000
EP/81 B/843 C/000 N/000 FAX/167
SI NIL
    
```

On the right, the 'Messages' window shows a list of messages with columns for Date, Time, From, Subject, SM, and Part. A selected message is shown in detail on the right side of the window.
