IATAText - Aeronautical Message System

Technical description

The «IATATEXT» software allows the sending and receiving of Type-B operational messages.

It is fundamental to the functioning of DCS in order to receive PNL/ADL messages to the address of the type xxxAMX. During flight closure of LDCS, IATAText facilitates sending of messages of the type PFS, LDM, PRL, PTM, ETL, etc.

The IATATEXT interface also allows manual sending of any other operational messages.

IATATEXT gère parfaitement la double-signature afin que les messages émis pour le compte des compagnies aériennes ne soient pas facturés à l'aéroport mais aux compagnies.

The screenshot shows the IATATEXT software interface. On the left, there is a 'DEPART' section with flight details for 'FR546' to 'Y189'. Below this, a yellow arrow points to a terminal window displaying a message: `IDM
FR546/15 PFSRI Y189 2/4
-STN 163/4/2 T043 1/000 2/043 3/000 4/000
EP/81 B/843 C/000 N/000 FAX/167
SI NIL`

The main window shows a list of messages with columns for Date, Time, From, Subject, SM, and Part. A detailed view of a message is shown on the right, including fields for From, To, Subject, and Message content.
